Load capacity diagrams

A conveyor roller consists of three elements: bearing, shaft and tube. To determine the load capacity of a conveyor roller the following diagrams and the specification of bearing for the described type should be studied. The weakest element provides the load capacity of the roller.

Steel tube – static surface loading

Plastic tube – static surface loading

Shaft – static loading – roller clamped

Shaft – static loading – roller not clamped

Shafts

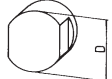

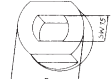

Rollex conveyor rollers are available for different types of shaft; this is a guarantee for the optimal compatibility in your kinds of utilisation. The shafts consist of cold-drawn steel. Upon request we also deliver the shafts either galvanized (Al) or made from stainless-materials **1.4305 (AN)**.

Slip-on caps

Shaft-slip-on caps made from thermoplastic synthetic material are useful as a protection against corrosion and they reduce noise.

Ordering advice

ROLLEX conveyor rollers are produced specially to clients requirements. In order to meet these requirements we need an exact specification of the required conveyor roller. The structure of our order standard is a guarantee for this. For an accurate size-production we especially need the size EL=length of installation.

Examples:

Type 300 – 50 x 1,5 STI A 12 IGM 8 EL 500

Type 500/300 – 60 x 2 STI A 14 IGM 10 EL 500

Illustration:

- 1 Specification of the type
- 2 Specification of the bearing, for driven and conical conveyor rollers
- 3 Conveyor roller tube diameter
- 4 Strength of the wall of the conveyor roller tube
- 5 Material of the conveyor roller tube, page I.3
- 6 Diameter and material of the shaft, page I.4
- 7 Type of shaft, page I.4
- 8 Length of installation, this example 500 mm

Further sizes, like RO = length of tube, RL = length of roller and AL = length of shaft are not necessary, as they result from EL. Only for standard roller. For specials those sizes have to be mentioned for correct production.

Technical advice

- Parallelity of shafts
- Identical level of rollers
- Parallelity of the roller conveyor profile
- Friction rollers not in change with non-driven rollers
- Environmental factors (dust, temperature, wetness etc.)
- Different running resistance of bearings (lubrication packing)
- Tube tolerance (DIN)
- Max. length of roller for plastic tubes
- Max. length of roller for steel tubes
- Electrostatic charge
- Bolt tooth form only for tangential drive
- Welding seams may be more than tube- ϕ
- Pressfit drive only when moving continuously
- Plastic parts of roller not for use with higher temperatures
- For unplain transport goods and low weights use adjustable friction
- Keep tolerance of chains and tooth-belts
- Note breakload of chains
- For unplain transport goods not all roller are in use
- Place motor concentric

		Type 50	Type 60	Type 50	Type 60		
8	RL +	33	30				

The bearing fitting consists of a steel driving element $\frac{3}{8} \times \frac{7}{32}$ z = 10 and counter bearing.

The accumulation pressure is 5-7 % of the loaded material weight.

Load capacity: Type 50 14 daN/roller
Type 60 40 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Special design:
Driving element galvanized 435 I ...
Driving element Niro 435 N ...
Tube Ø 40 or Ø 50

Example how to order:
Type 435/60-30 x 1 STI A 8 M 8 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order.

Driving element	Type	Counter bearing
Accumulation drive with grooved ball-bearing 608 Z	435	50 / 60
Accumulation drive with grooved ball-bearing 608 RS	435 RS	51 / 60 RS
Positive drive with grooved ball-bearing 608 Z	436	50 / 60
Positive drive with grooved ball-bearing 608 RS	436 RS	51 / 60 RS

Conveyor Roller Type 437

Tube Ø 30, 32

15	RL +	70		54			
17	RL +	70		54			

The bearing fitting consists of a steel driving element 8 M z = 20 for tooth belt b = 12, and counter bearing.

Load capacity: max. 150 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Type of tooth belt: page IX.8

Special design:
Driving element galvanized Type 447 I...

Example how to order:
Type 447/250-80 x 2 ST A 15 IGM 10 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order.

Driving element	Type	Counter bearing
Positive drive (welded) with grooved ball-bearing 6202	447	250 / 260 / 302
Positive drive (welded) with grooved ball-bearing 6202 RS	447 RS	250 RS / 260 RS / 302 RS

Conveyor Roller Type 450

Tube Ø 50, 60, 60.3, 63, 63.5, 70, 80, 90

Illustration includes Type 730 „Rollex – chain slide bar with C-profile“

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
10	RL +	45		33			
12	RL +	47		33			
14	RL +	49		33			

The bearing fitting consists of a driving element $\frac{1}{2} \times \frac{5}{16}$ " z = 11 (bolt tooth form) made from thermoplastic synthetic material, and counter bearing.

This type is also available with plastic driving element $\frac{1}{2} \times \frac{5}{16}$ " z = 9 KM-EL = 15,5

The accumulation pressure is 5-7 % of the loaded material weight.

The positive drive type 451 should only be used for continuous transport. As tail sheave conveyor for this type 457 can be used.

Load capacity: max. 40 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Example how to order:
Type 451/300-63 x 3 KB A 12 IGM 8 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Accumulation drive with grooved ball-bearing 6202	450	200 / 250 / 280 300 / 302
Accumulation drive with grooved ball-bearing 6202 RS	450 RS	250 RS / 300 RS 302 RS
Accumulation drive with grooved ball-bearing 6202 synthetic material with stainless steel balls W-Nr. 4401	450 D	300 D / 302 D
Positive drive (pressfit) with grooved ball-bearing 6202	451	200 / 250 / 280 300 / 302
Positive drive (pressfit) grooved ball-bearing 6202 RS	451 RS	250 RS / 300 RS 302 RS
Positive drive (pressfit) with grooved ball-bearing 6202, synthetic material with stainless steel balls W-Nr. 4401	451 D	300 D / 302 D

Conveyor Roller Type 452

Tube Ø 50, 60, 60.3, 63, 63.5, 70, 80, 90

Illustration includes Type 730 „Rollex – chain slide bar with C-profile“

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
10	RL +	45		33			
12	RL +	47		33			
14	RL +	49		33			

The bearing fitting consists of a driving element $\frac{1}{2} \times \frac{5}{16}$ " z = 11 (bolt tooth form) with slide bearing, made from thermoplastic synthetic material and counter bearing.

The accumulation pressure is 5-7 % of the loaded material weight.

The positive drive type 453 should only be used for continuous transport.

Load capacity: max. 40 daN/roller
with outboard bearing type 100/102 24 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Example how to order:
Type 452/150-50 x 2,8 KB A 12 IGM 8 EL ...

The type of drive and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Accumulation drive	452	102 / 150 / 300 D / 302 D
Positive drive (pressfit)	453	150

Conveyor Roller Type 454

Tube Ø 50, 60, 60.3, 63, 63.5, 70, 80, 90

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
10	RL +	45		33			
12	RL +	47		33			
14	RL +	49		33			
17	RL +	49		33			

The bearing fitting consists of a steel driving element $1/2 \times 5/16$ " z = 11 (bolt tooth form) and counter bearing.

The accumulation pressure is 5-7 % of the loaded material weight.

The positive drive should only be used for continuous transport. As tail-roller Type 457 should be used.

Load capacity: max. 100 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Special design:

Driving element galvanized 454 I...
 Driving element Niro 454 N...
 Type 456 with tube Ø 40

Example how to order:

Type 454/300-50 x 1,5 STI A 12 IGM 8 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Accumulation drive with grooved ball-bearing 6202	454	200 / 250 / 300 / 302 / 402
Accumulation drive with grooved ball-bearing 6202 RS	454 RS	250 RS / 300 RS / 302 RS / 402 RS
Positive drive (pressfit) with grooved ball-bearing 6202	455	200 / 250 / 300 / 302 / 402
Positive drive (pressfit) with grooved ball-bearing 6202 RS	455 RS	250 RS / 300 RS / 302 RS / 402 RS
Positive drive (welded) with grooved ball-bearing 6202	456	200 / 250 / 260 / 300 / 302 / 400
Positive drive (welded) with grooved ball-bearing 6202 RS	456 RS	250 RS / 260 RS / 300 RS / 302 RS / 400 RS

Conveyor Roller Type 454 R

Tube Ø 50, 60, 60.3, 63, 63.5, 70, 80, 90

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
15	RL +			58			

The bearing fitting consists of a steel driving element 1/2 x 5/16" z = 11 (bolt tooth form) and counter bearing.

The take-along strength is adjustable in consideration of the spring deflection.

Load capacity: max. 150 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Example how to order:
Type 454 R/300-50 x 1,5 STI A 15 IGM 8 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Accumulation drive with grooved ball-bearing 6202	454 R	251 / 300 / 302
Accumulation drive with grooved ball-bearing 6202 RS	454 R RS	251 RS / 300 RS 302 RS

Conveyor Roller Type 457

Tube Ø 50, 60, 60.3, 63, 63.5, 70, 80, 90

Illustration includes Type 730 „Rollex – chain slide bar with C-profile“

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
12	RL +	47		33			

The bearing fitting consists of a steel driving element $1/2 \times 5/16$ " z = 11 and counter bearing.

The accumulation pressure is 5-7 % of the loaded material weight.

The positive drive should only be used for continuous transport. This type of roller is suitable as tail.

Load capacity: max. 100 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Special design:

Driving element galvanized 457 I...

Driving element Niro 457 N...

Example how to order:

Type 457/300-50 x 1,5 STI A 12 IGM 8 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Accumulation drive with grooved ball-bearing 6202 Z	457	250 / 300 / 302
Accumulation drive with grooved ball-bearing 6202 RS	457 RS	250 RS / 300 RS 302 RS
Positive drive (pressfit) with grooved ball-bearing 6202	458	250 / 300 / 302
Positive drive (pressfit) with grooved ball-bearing 6202 RS	458 RS	250 RS / 300 RS 302 RS

Conveyor Roller Type 460

The bearing inside the driving element and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Positive drive (welded) with grooved ball-bearing 6003, 6202, 6204	502	200 / 250 / 260 300 / 302 / 400
Positive drive (welded) with grooved ball-bearing 6003 RS, 6202 RS, 6204 RS	502 RS	250 RS / 260 RS 300 RS / 302 RS 400 RS

Conveyor Roller Type 506

Tube Ø 50, 60, 60.3, 63, 63.5, 70, 80, 88.9, 90

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
10	RL +	48					
12	RL +	50		36			
14	RL +	52		36			
15	RL +	52		36			
17	RL +	52		36			

The bearing fitting consists of a steel driving element $1/2 \times 5/16'' z = 14$ (bolt tooth form) and counter bearing.

The accumulation pressure is 5-7 % of the loaded material weight.

The positive drive type 507 should only be used for continuous transport.

Load capacity: max. 100 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

Special design:

Driving element galvanized 506 I...
 Driving element Niro 506 N...
 Type 508 tube Ø 40

Example how to order:

Type 506/300-50 x 1,5 STI A 12 IGM 8 EL ...

The type of drive, the bearing inside the driving element and the counter bearing provide the type of order:

Driving element	Type	Counter bearing
Accumulation drive with grooved ball-bearing 6003, 6202, 6303	506	200 / 250 / 260 300 / 302 / 402
Accumulation drive with grooved ball-bearing 6003 RS, 6202 RS, 6303 RS	506 RS	250 RS / 260 RS 300 RS / 302 RS 402 RS

	Rollex Drive System Construction Advice	12

Clutch Type 530

for non-impact transport

The system is primarily driven tangentially by a single steel sprocket-wheel $\frac{5}{8} \times \frac{3}{8}$ " $z = 13$. This drives a secondary sprocket-wheel $\frac{1}{2} \times \frac{5}{16}$ " $z = 14$ which drives a section of rollers.

If goods are backed-up on the rollers, the clutch engages and the primary to secondary drive is interrupted, thus stopping the whole section.

The drive should be positioned near the station of origin.

Example:

Goods are loaded on to the empty conveyor. These travel over all sections until the light barrier of section 1 is activated. The section 1 drive is thus disengaged and the section 2 control valve activated, the same process being repeated for section 3 etc.

To re-activate the system, goods may be removed from the conveyor at any stage and the backed-up goods all move forward one section. On automatic conveyors, a switch can be used with the same effect. The switch is placed so that goods can be removed from any section.

Type 530

Construction advice

The minimum weight of the loaded-goods is so low so that empty pallets can also be transported. The section-length should be laid-out according to the goods-length, plus the required gap between sections (min. 200 mm). The light barrier should be positioned according to the weight and speed of the loaded goods.

The conveyor-length is to be laid-out so that a maximum weight of 4 000 da/N will be transported. To this effect, the following factors must be considered:

- loaded-goods weight
- loaded-goods speed
- function frequency

Calculation example:

loaded-goods weight: 1000 da/N

loaded-goods speed: 12 m/min

function frequency: 2 pcs/min

Four goods (4000 da/N) may be transported at the same time. If a fifth good is placed on the conveyor after 2 minutes, the first good has travelled 24 meters, this being, in this example, the maximum conveyor-length per drive.

This calculation is only relevant to the loading on an empty conveyor, as only two goods are in movement when the backed-up capacity is reached, or when goods are removed.

In the ROLLEX-Programme you will find the following components:

Clutch, pneumatic cylinder with trip cam, light barrier with pneumatic valve, conveyor rollers and chain slide bar with C-profile.

Clutch Type 531

for non-impact transport

The system is primarily driven tangential by chain or tooth belt and drives secondary a section of positive drive conveyor rollers by chain or tooth belt.

This will be made by the goods that meets a light barrier with pneumatic valve and so engages the Pneumatic Cylinder.

If the goods are backed up, the clutch engages and interrupts the power between primary and secondary drive, so stopping the whole section.

Loaded goods weight:

1 - 120 daN (depends on the drive)

Loaded goods speed:

max. 0,6 m/sec. (depends on drive and loaded goods weight)

Clutch types:

single $\frac{1}{2}'' \times \frac{5}{16}'' z 11$ - single $\frac{1}{2}'' \times \frac{5}{16}'' z 11$

single $\frac{1}{2}'' \times \frac{5}{16}'' z 14$ - single $\frac{1}{2}'' \times \frac{5}{16}'' z 14$

double $\frac{1}{2}'' \times \frac{5}{16}'' z 14$ - single $\frac{1}{2}'' \times \frac{5}{16}'' z 14$

double tooth-belt 8 M z 20 - single tooth-belt M 8 z 20

Type 530/531

Construction advice

Conveyor Roller Type 535

with clutch for non-impact transport
Tube Ø 50

The conveyor roller type 535 is driven tangential with a plastic-single chain wheel 1/2" x 5/16" z 11. This drives a section of rollers by belt, chain or tooth-belt.

If the goods are back-up the drive will be interrupted and the section stopped. This will be made by the goods, passing a light-barrier with pneumatic-valve actuating the pneumatic cylinder.

Loaded goods weight:
0,1 - 60 daN (depends on the drive)

Loaded goods speed:
max. 0,6 m/sec. (depends on drive and loaded goods weight)

Type 535

Construction advice

Type 530 Z / 531 Z

Pneumatic Cylinder

530 Z - 20 x 4 KS A12
with release spring
lift 20 mm / 4 bar

Datas:

Material: Plastic black
Cylinder rod: Steel with shift cam
Connector: Plastic tube

Connecting to Light-Barrier by reducing from 6 to 4 mm
Lift: 20 mm
Max. Pressure: 4 bar

Function:

Resting position without air:

- Cylinder rod out
- Clutch latched off
- Section standing

With air:

- Cylinder rod in
- Clutch latched in
- Section running

Type 530 Light Barrier

Reflex Sensors for Roller Conveyor Systems

All dimensions in mm (1 mm = 0,03937 Inch)

Type 536 E Magnetic Roller with Brake

Tube Ø 88.9

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
25	RL+			115			

Magnetic clutch data				
max. paletten weight in kg	max. torque in Nm	voltage in V DC	max. torque in W	clutch diameter in mm
1200	40	24	32	108

Design details:

- less wear and temperature resistant friction surface
- unlimited duty cycles
- insulation group B
- torsion free
- quiet operating system no noise development
- short contact time
- easy mounting features

Installation instructions:

- avoid contact with oil and grease on the clutch
- nominal power: 24 VDC
- min. power requirement: 24 VDC
- do not exceed max. power by more than 10%
- ensure that the shafts are installed parallel
- the max. load for each Magnet-Roller is 200 kg

Rollex Drive System

Basics

The Rollex Drive System has been developed for use of Zero-Pressure Systems. It operates with all 24V Drive-Systems from our Product Range.

The Zero-Pressure Switch has an integrated logic, that communicates with the switches of the pre- and after-sections.

The basic advantage is that the drive is only switched on, if the loaded good runs in the section, and is switched off, if it leaves the section.

With the sectional switching of the electro magnetic clutch system (Type 536E) a break can be activated to stop the goods fast and smooth.

The Rollex Drive System is activated by a Light-Barrier.

Basic plan of the Zero-Pressure System:

Rollex Drive System

Basics

Plug-in of this Control Board will happen by connecting the M8-Clamp to the pre- and after-section. The Power Supply can be made separately. For power supply through the Card all 14 to 20 Cards have to be feed new, re the drive concept.

Plan of the Card:

Technical Datas:

Power Supply	24 V DC +/- 10%								
Temperature	+ 5° C to +40° C								
Fuse	3,15 A								
Current Limiter	<table border="0"> <tr> <td>Motor/Clutch</td> <td>Starting Current 1,8A / 200 ms</td> </tr> <tr> <td></td> <td>Continuous Load 1,8 A</td> </tr> <tr> <td>Break</td> <td>Starting Current 1,8A / 200 ms</td> </tr> <tr> <td></td> <td>Continuous Load 1,2 A</td> </tr> </table>	Motor/Clutch	Starting Current 1,8A / 200 ms		Continuous Load 1,8 A	Break	Starting Current 1,8A / 200 ms		Continuous Load 1,2 A
Motor/Clutch	Starting Current 1,8A / 200 ms								
	Continuous Load 1,8 A								
Break	Starting Current 1,8A / 200 ms								
	Continuous Load 1,2 A								

Rollex Drive System

Construction Advice

The Rollex Drive System Card is protected by a plastic box. This box can be mounted to the profile by the customer with M4 screws.

Conicities

1. Conical elements

Types 563, 601

x = inner radius 373 mm

Types 566, 602

x = inner radius 500 mm

Types 541, 543, 551, 553, 600

x = inner radius 800 mm

2. Conical Roller with PUR-RIM coating, 73° Shore D upon cylindrical roller

The available conicities of the coating you will receive upon request.

The coating is not antistatic and not heat resistant.

Conveyor Roller Type 541

Tube Ø 50

Order specification		A... M...	A... AGM...	A... IGM...	A... glatt	A... SW...	A... FA...
Shaft-Ø	EL =						
10	RL +	79		67			
12	RL +	81		67			
14	RL +	83		67			

The conveyor roller is available with conical elements made from thermoplastic synthetic material (Dimensions page IV.1).

The bearing fitting consists of a synthetic material driving element $1/2 \times 5/16'' z = 14$ and counter bearing.

The accumulation pressure is 5-7 % of the loaded capacity weight.

The positive drive type 541 should only be used for continuous transport.

Load capacity: 40 daN/roller

Type of tube: page I.3

Type of shaft: page I.4

The type is also available with GFK-coating for different inner radius.

Example how to order:
Type 541/300-50 x 1,5 STI A 12 IGM 8 EL ...

The type of drive, the bearing inside the driving element and the conicity provide the type of order:

Driving element	Type	Counter bearing
Conical elements		
Accumulation drive with grooved ball-bearing 6202	540	300
Accumulation drive with grooved ball-bearing 6202 RS	540 RS	300 RS
Positive drive (pressfit) with grooved ball-bearing 6202	541	300
Positive drive (pressfit) with grooved ball-bearing 6202 RS	541 RS	300 RS

Conveyor Roller Type 543

Motor drums Motor-Roller

Type	page
Motor drum TM 114	1
Motor-Roller Type 840-50	2-4
Motor drum Type 850-89	5-6

Type TM 114

The drum motors type TM 114 are especially for small belt conveyors. The construction with slightly crowned aluminium fitting and plastic planetary gear guarantees an efficient and also silent running unit. The integrated thermoprotector prevents damage to the motor.

Technical facts

TM 135 with power 0,37 kw upon request.

Motor-Roller Type 840 – 50

The Motor-Roller Type 840 is available with three different gears:

Motor Variation	Gear	Stage	Speed in m/s	Torque in Nm	Engine Revolution in RPM
I	13 : 1	2	0,20 - 0,48	1,8	1000 - 2400
II	8 : 1	1	0,51 - 0,77	1,1	1600 - 2400
III	4 : 1	1	0,76 - 1,30	0,5	1400 - 2400

Construction Details

Tube of Motor-Roller: Galvanized Steel Tube 50x1,5 STI. Upon request the Motor-Roller can be supplied with stainless steel tube. Further tubes with coating can be quoted, e.g. PVC-Hose or Rubberising.

Electrical Supply: In all Motor-Roller the cables go out through the shafts.

Gear: Depending on the revolution single- or twin-stage gear. The gears are made from high quality steel.

Bearing: Precision Ball Bearing 6202 2RS

Nominal Power: The Motor is build for a nominal power of 24VDC. Max. power should not exceed by more than 10%.

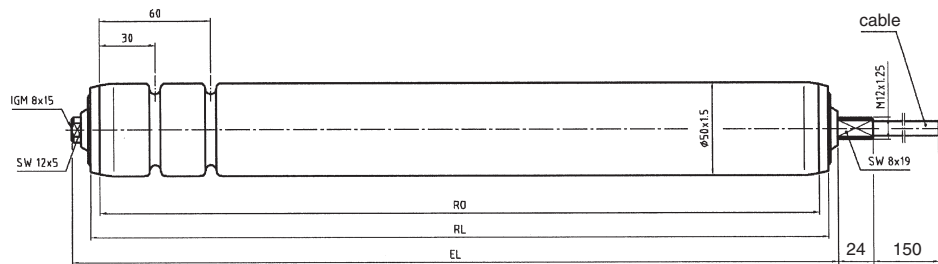

Insulation: All motors are build re insulation group F (IP 54).

Power Supply: Please note, there will be a loss in power supply, that is proportional to the length of the cables and the motor power. The loss should not be more than 3%.

Motor-Roller Type 840-50

Type 840 can be equipped with different drive solutions.

Round-belt drive

EL min: 300 single-stage gear
320 twin-stage gear

Tooth-belt drive

EL min: 300 single-stage gear
320 twin-stage gear

Conical roller with round-belt drive

EL min: 300 single-stage gear
320 twin-stage gear

Technical Details:

Nominal voltage	24 V DC
Rated current	4 A
Voltage	18 - 28 V
Fuse	5 A slow to blow
Temperature	0 - 40° C

Type 840 - 50 Control-Card Motor

The brush less Motor-Roller is used with control card. With that card the Motor-Roller is connected to the power supply as well as to a SPS control. Further with this card the direction and the speed can be controlled.

Switch	Speed (m/s)			Direction	Revolution
	i = 4,84	i = 8,14	i = 13,17		
0	1,30	0,77	0,48	left- turn	2400
1	1,19	0,71	0,44		2200
2	1,08	0,64	0,40		2000
3	0,97	0,58	0,36		1800

F	0,54	0,32	0,20	1000	

Connections on the card:

- 1 Fault exit -
- 2 Fault exit +
- 3 GND (entry direction and start)
- 4 Entry direction

- 5 Entry start
- 6 Nominal Voltage GND (-24 V)
- 7 Nominal Voltage +24 V

Entries:

Input resistor	5,6 K
Low	0 - 5 V DC
High	15 - 24 V DC
U-max	30 V DC
Fault exit + (2)	24 V DC
Fault exit - (1)	Entry SPS

Type 850 - 89

The Rollex-Drum-Motor Type 850 - 89 can be used for all pallet-transportations.

The Drum-Motor has following specifications:

Motor Variation	Voltage in V	Rated Current in A	Frequency in Hz	Power in kW	Speed in m/s	Torque Nm	Peripheral Force N
Variante I	230/400	0,59/0,34	50	0,12	0,24	21,1	475
Variante II	230/400	0,59/0,34	50	0,12	0,34	14,7	331

The different variations result from the two Speed-Variations.

The Drum-Motor is an Asynchronous Motor, that is available for the following voltages:

3 x 400V/50Hz (Motor is Star(Y) connected)

3 x 230V/50Hz (Motor is Delta(Δ) connected)

Cables can be supplied with straight- or angled screw coupling.

Break:

The Drum-Motor can be supplied with an internal Break, that is prepared for Start-Stop.

The Starting Torque depends on the oil volume, temperature of the surrounding and working temperature of the Motor.

The Drum-Motor can be used in Deep-Freeze Areas of -30° C, if the Motor is equipped with an anti-condensation heating.

Type 850 - 89

The Rollex-Drum-Motor can certainly be equipped with driving elements to move single sections of the conveyor track.

Example with Sprocket Type 510 (5/8" z15)

Example Tooth-Belt Wheel Type 534 z34 (8M HTD)

Cables and connections will be attached to the delivery, but can also be ordered separately.

Re customers information!

Various constructions and dimensions as well as steering and flat belt stations upon request.

Roller for Conveyor Stations

Conveyor Roller Type 400

Tube Ø 50, 60, 63.5, 80, 88.9, 90, 108, 133

Conveyor Roller Type 402 WO

Tube Ø 80, 88.9, 108, 133

The above mentioned Roller Types are best for use as Conveyor Station Roller. Details please see Chapter II „Gravity Roller / Conveyor Roller“ on Page 17 and 27.

Conveyor Roller Type 400

for belt conveyor DIN 15207 with length of tube DIN 22107

End of shaft construction: Ø 20 old standard SW 15 x 10/13
 Ø 25 old standard SW 18 x 10/13
 Ø 20 new standard SW 14 x 10/13

Order without specification will be delivered to the old standard.

Upper conveyor roller									
Tube-Ø	Shaft-Ø	Roller length mm, EL = RL + 6 mm							
63,5	20	132	165	200	250	315	380	465	530

Brake roller

Brake conveyor roller

These regulate the speed on gravitational force roller belts; the shunting speed of the loaded material is constant. This is possible because the planetary gear pressures with every turn the centrifugal brake-shoe against the roller, with proportional braking force to used braking torque.

The distance between the braking roller and the right braking roller type is influenced by many factors:

- Construction and function of the roller track
- Inclination of the roller track
- Behaviour of the loaded material (size, weight, material of skid sensitivity)
- Inherent resistance of the brake roller
- Environmental factors (wetness, cold, heat)

Per pallet position, one braking roller is necessary, as then there will be a controlled speed. The shunting speed should never be more than 0,3 m/sec. When the braking roller has the right position, the shunting speed is only 0,1-0,2 m/sec.

Brake roller

The brake roller has direct contact to the loaded material when the **direct** brake is used. It is suspended spring-loaded and stands 2 mm above the level of the roller.

The **indirect** brake is preferable, because the contact to the pallet is transmitted over two conveyor rollers.

Four springs effect the contact, two hook bolts, which are installed loose, lock the brake roller.

To improve the contact of brake roller, conveyor roller and pallet a self-adhesive rubbing coating on the conveyor roller in the area of the brake roller is necessary.

Brake conveyor roller

The brake conveyor roller is attached with two suspension strips spring loaded 2 mm above the level of the roller. The brake conveyor roller will be delivered with these suspension parts.

Brake Conveyor Roller Type 700-80

max. braking capacity

Skate Wheels

Plastic Wheels Type 610 and 611 (guide flange) have a load capacity of 10 daN(kg). Steel Wheels Type 612 with or without guide flange = Load capacity 20 daN (kg).

Wheels of the Types 610/611/612 are used in all areas of conveyor- and storage-technology for

- Flow-Trough Tracks
- Guide tracks, side deflector and load tracks in conveying systems
- Roller tracks for the combination of two workstations
- Packing machines
- Guide for driving belts

Universal Roller

Type 620

Plastic, one piece

D	40	48	60	80
A	8	8	8	8
B	26	37	47	60
C	29	39	48	64

Type 625

Plastic, two piece

D	50	60	80
A	8	8	8
B	19,5	25	30
C	39	51	60

Universal roller are used where packing drums, load carrier, packages, cartons or work pieces have to be turned, assorted, diverted, supplied or commissioned. The size and the weight of the load regulate the pitch. Table surfaces of any sizes can be equipped with Universal Roller. Following individual load capacities each roller should not be exceeded:

- Ø 50 mm 100 daN (kg)
- Ø 60 mm 200 daN (kg)
- Ø 80 mm 400 daN (kg)

The universal roller can be used at a temperature range between -12° C and +80°C.

The universal rollers always have to be installed in main transport direction, as the resistance of the other roller is slightly higher.

If equal resistances should be received in all directions, wheels have to be mounted staggered at 90°

Palletrail Type 720

Splittings: 52, 78, 104, 130, 156 ...

The palletrail type 720 is a universal unit for the transport of pallets. It is also possible to construct simple roller conveyors or straight-through shelves. It is also adapted for transports inside your factory, linking of work-places and as a sidewise guide rail.

The palletrail consists of galvanized steel, 55 mm high and 80 mm wide. These profiles are suitable with roller \varnothing 50 mm in splittings of 52, 78, 104, 130, 156.

Two further bolt-holes in the housing are useful for the fixing of the rail on the under-construction.

Wy: 4,6 cm³
 ly: 17 cm⁴
 length of profile: 6006 mm

**Conveyor Roller Type 200
without guide rail**

**Conveyor Roller Type 200
with guide rail**

The channel section is suitable for accepting nearly all rollers in our programme.

Accessories for Palletrails

End Stop

Roller Guard
on entry side

Connector

Pallet Rail Type 723

W_v : 4,6 cm³

Type 723 with steel roller, screwed or riveted.
Mounting in upper or low holes possible.

Type 724 with plastic roller, screwed or riveted.
Mounting in upper or low holes possible.

Pallet Rails consist of cold-drawn, galvanized steel profile, 2 mm thick. The profile has two sets of lateral perforations at different heights, pitch 25 mm and the base is also punched with a hole row, even pitch 25 mm. Hole dia. is 8,1 mm.

The construction of the profile makes it possible to fit 48 mm diameter wheels with screws or hollow rivets in pitches of 50 mm, 75 mm, 100 mm and so on.

Several wheels can be fitted next to each other in one, two, three or more channels. Further you can combine different wheels, with or without flange, steel or plastic.

Pallet Rail Type 726

T = 33, 50, 66, 83, 100

T = 50, 66, 83, 100 with guide flange wheels

W_y: 0,6 cm³

Main purpose of the above pallet rails are flow through racks. The absolute safe run of load carriers and cartons allows many more possibilities.

- guide rails for conveyor systems
- roller rails and roller carpets as link between two work stations
- packing and despatch tables
- installation help, e.g. in wood and glass industry

Wheels running on steel shafts guarantee a high load capacity (6 daN[kg]) and very low coefficient of friction. The wheels are made of high-quality thermoplastic, which is impact resistant and does not brittle. The material is resistant against acids and alkali and does not attract moisture.

The channel profile is made of bright zinc-plated sheet with rounded edges on all sides. Changing of the wheels is very easy. Several Wheel pitches can be obtained (33 mm, 50 mm, 66 mm, 83 mm, 100 mm etc. with either normal or flanged wheels.

The pallet rail with steel shaft for smooth and silent running of material flow is:

- strong and tough
- economical and inexpensive
- variable as no other wheel system

Tooth Belt Poly Chain GT

The Poly Chain® GT is a aramid supported Polyurethan Synchro-Belt. It opens new dimensions for Roller Drives and has the following advantages against chains:

- no greasing
- no re-stretching
- low noise, even with high speeds
- high shearing resistance of the teeth allows fixed centre to centre axle distances
- resistant against aggressive surroundings (Dust, Oil, etc.)
- high resistant against abrasion and therefor extremely long life
- full use with temperatures from + 10° to + 60° C
- low weight
- specially constructed for long life

Poly Chain®

Poly Chain thoth belts have to be used for 445 / 445ST / 445RST und 447.

Tooth-Belt HTD/RPP

HTD belts have to be used for Roller Types 516 / 517 / 533 R and 534.

The mentioned RPP Belts can be used without problems in HTD sprockets.

The RPP Belt System has been developed as alternative system against loud, greasy chains, RPP belts offer hi-performance with the possibility to use an extern tension pulley, better heat-resistance and lower noise.

- **maximum drive efficiency**
The RPP drive system offer an efficiency of nearly 98% for a large rpm-areas.
- **soft running**
The drive systems absorb shocks and damp vibrations better than chains.
- **constant tension**
will be kept the whole life of the drive system
- **high shock resistance**
The RPP belt used ARAMID cords that combine the tension of steel with the stability and flexibility of glass fibre. Excellent for shock resist and drive vibrations.
- **low noise**
The RPP belt uses the same soft running, parabolic tooth profile that has been very effective with the RPP HPR belt. Tests in laboratories have shown, that RPP belts move definitely more quiet than comparable Polyurethane-Belts.

- **use of extern tension pulleys**
Synchronous drives often work with fixed centre distances and are often used with extern tension pulleys to get the right belt tension. The flat, precise rubber back is excellent for those pulleys.
- **better heat resistance**
Polyurethane melts if heat is too big, RPP belts work up to a temperature of 100° C.
This is 100% more than similar Polyurethane belts.
- **no maintenance**
RPP drives work clean and reduce maintenance costs

Available Tooth-Belts:

HTD - 8M - 1000 - 20 / 30

Conditions of sale and delivery

§ 1 General

1. Our terms and conditions of business shall apply exclusively:

These conditions of supply and payment apply for all deliveries. Any different conditions on the part of the customer only apply in so far as they are expressly recognised by us in writing. A contract is established when Rollex issues the written confirmation of order, unless otherwise agreed.

Written order confirmation of Rollex is decisive as regards the scope of delivery. Changes and additions must be made in writing. This also applies if this requirement for written form is to be waived.

Rollex retains title and copyright in samples, cost estimates, drawings and other information, both tangible and intangible, including in electronic form; such items may not be made accessible to third parties. Rollex undertakes only to make information and documents which are marked as confidential by the customer available to third parties with the agreement of the customer.

§ 2 Price and payment

The prices named in the order confirmation apply ex works in the absence of express agreement to the contrary, without packaging, free on truck or rail, without transport insurance. The valid legal rate of VAT is to be added. In the absence of agreement to the contrary, payment shall be made on account without any deduction, due on delivery. The right to withhold payment or to offset counterclaims is only available to the customer in so far as his counterclaims are undisputed or legally established.

§ 3 Time of delivery, Delay in delivery

The time and period of delivery result from the agreements between the contractual partners. Fulfilment of the agreements on the part of Rollex assume that all commercial and technical questions between the parties have been clarified and the customer has also fulfilled all his obligations, such as for example provision of the necessary official approvals or certificates and payment of a deposit if so agreed. If this is not the case, the delivery period shall be prolonged correspondingly, or alternatively by an appropriate period. This does not apply if the delay is due to the supplier.

Fulfilment of the period of delivery is subject to correct and timely supply of goods by the supplier's subcontractors. Any delays which are anticipated must be communicated by Rollex as soon as possible.

The delivery period is considered fulfilled if the object of the delivery has left Rollex's factory by the end of the period. If despatch or acceptance of the object of the delivery is delayed for reasons which are due to the customer any costs accruing from the delay shall be charged to the customer, starting one month after reporting of the readiness for despatch or acceptance.

If non-fulfilment of the delivery period is due to force majeure, labour conflicts or other events outside the sphere

of influence of the supplier, the period of delivery shall be prolonged accordingly. Rollex will inform the customer of the start and end of such circumstances.

The customer can withdraw from the contract if the entire performance becomes impossible for Rollex before transfer of risk. The customer can also withdraw from the contract in case execution of a part of the delivery becomes impossible, and he has a justified interest in refusing the partial delivery. If this is not the case, the customer must pay the contractual price which is due for the partial delivery. The same applies if Rollex cannot supply the performance.

§ 4 Transfer of risk, acceptance

The risk is transferred to the customer when the object of delivery has left the factory, even if partial deliveries take place or Rollex has taken over other performance, e.g. despatch costs or delivery and erection. If an acceptance procedure has to be implemented, acceptance is decisive for transfer of risk. It must be carried out immediately at the acceptance date or alternatively after report by the supplier that the item is ready for acceptance. The customer may not refuse acceptance in the case of non-serious fault. Partial deliveries are permissible in so far as reasonable for the customer.

§ 5 Retention of title

Rollex retains the title to the object of delivery until all payments arising from the supply contract have been met. The customer may neither sell nor pledge the object of delivery nor offer it as security. The customer must inform the supplier immediately in case of pledge or seizure or other similar actions affecting the goods on the part of third parties. If the customer behaves in such a way as to infringe the contract, in particular in case of delay of payment, Rollex is entitled to take back the object of delivery after issuing a warning and the customer must return the goods. Based on his retention of title, the supplier can only demand return of the goods when he has withdrawn from the contract. Application for opening of insolvency proceedings on the part of the customer entitles Rollex to withdraw from the contract and to request immediate return of the object of delivery.

§ 6 Claims resulting from defects

Rollex provides warranty for defects as to the quality of the goods or for defect of title, excluding further claims.

Defects in quality

All parts which prove defective as a result of circumstances lying before the time of acceptance must be repaired or replaced by perfect goods at the discretion of the supplier. Any faults which are discovered must be communicated to Rollex immediately in writing. The customer must agree on the time needed for repairs and replacement and accord Rollex such time and also opportunity; otherwise Rollex is freed from liability for any resulting consequences. Only in cases where operational safety is at stake or in order to prevent disproportionate damage, has the customer the right

to repair defects himself or have them repaired by third parties and to demand compensation for the resulting costs. The supplier must be informed immediately.

Any immediate costs resulting from the repair or replacement shall be borne by Rollex, in so far as the complaint proves to be justified, including costs of the replacement and despatch. Rollex shall not bear the cost for dismantling and installing the part or costs for supply of the necessary operators and auxiliary workers, including travel costs.

Within the framework of the legal regulations, the customer has the right to withdraw from the contract if Rollex allows a suitable period for repair or replacement of an item which exhibits quality defects to pass without action, taking legal exceptions into consideration. If only a slight defect is present, the customer only has the right to reduction of the contractual price. The right to reduce the contractual price is otherwise excluded.

In particular, no warranty is accepted in the following cases: unsuitable or improper use, incorrect assembly or commissioning by the customer or a third party, natural wear and tear, incorrect or careless treatment, improper maintenance or repair, use of unsuitable operating materials, unsuitable construction work, unsuitable building land, chemical, electro-chemical or electrical influences in so far as they do not lie within the sphere of responsibility of Rollex. If the customer or third party carries out unsuitable repairs, Rollex shall not be responsible for any consequences which may result. The same applies for changes to the object of delivery carried out without the prior agreement of the supplier.

§ 7 Liability

In case of liability which is legally specified and which does not depend on blame or fault, in particular for liability resulting from guarantee or from product liability law, Rollex shall accept unlimited liability. In the case of other infringements of obligations, Rollex shall only be liable for deliberate intent and gross negligence. This limitation shall

also apply for legal representatives, employees, staff and vicarious representatives of Rollex. In so far as any obligation is infringed which is of particular significance for fulfilment of the contractual goals (cardinal duty), Rollex shall also accept liability in cases of slight negligence. However, liability for indirect and unforeseeable damages as well as for damages consequential upon defects and loss of profit, savings which have not been achieved, damage to assets because of claims of third parties or other consequential damage, Rollex shall only be liable for infringement of a cardinal obligation in cases of intent and gross negligence. The liability of Rollex is limited to three times the net invoiced amount of the goods or services giving rise to the claim.

§ 8 Period of limitation

All claims of the customer based on any legal grounds whatsoever, lapse after 12 months. Legal periods of limitation apply for claims for damages resulting from § 7.2 a-e. They also apply for defects in a building or for objects of delivery which are used corresponding to their general use for a building and which have caused defects in the building.

§ 9 Governing law, legal venue

All legal and contractual relationships between Rollex and the customer shall be regulated by the governing law of the Federal Republic of Germany. The Uniform Law regarding International Sale of Goods of 17.07.1973, BGBII856-EKAG is excluded. The legal venue shall be the court responsible for the registered office of Rollex. Rollex is also entitled to bring charges at the registered office of the customer.

§ 10 Validity of Contract

If any provision of this contract should be currently invalid or incapable of implementation or should prove so in future, the validity of the remaining provisions shall not be affected.
